Product Development

Agile product development process aimed to implement and launch minimum viable version of the product

Enhancements and Support

Further improvement, new features development, optimization and support of the product according to a roadmap

Case Studies & Testimonials

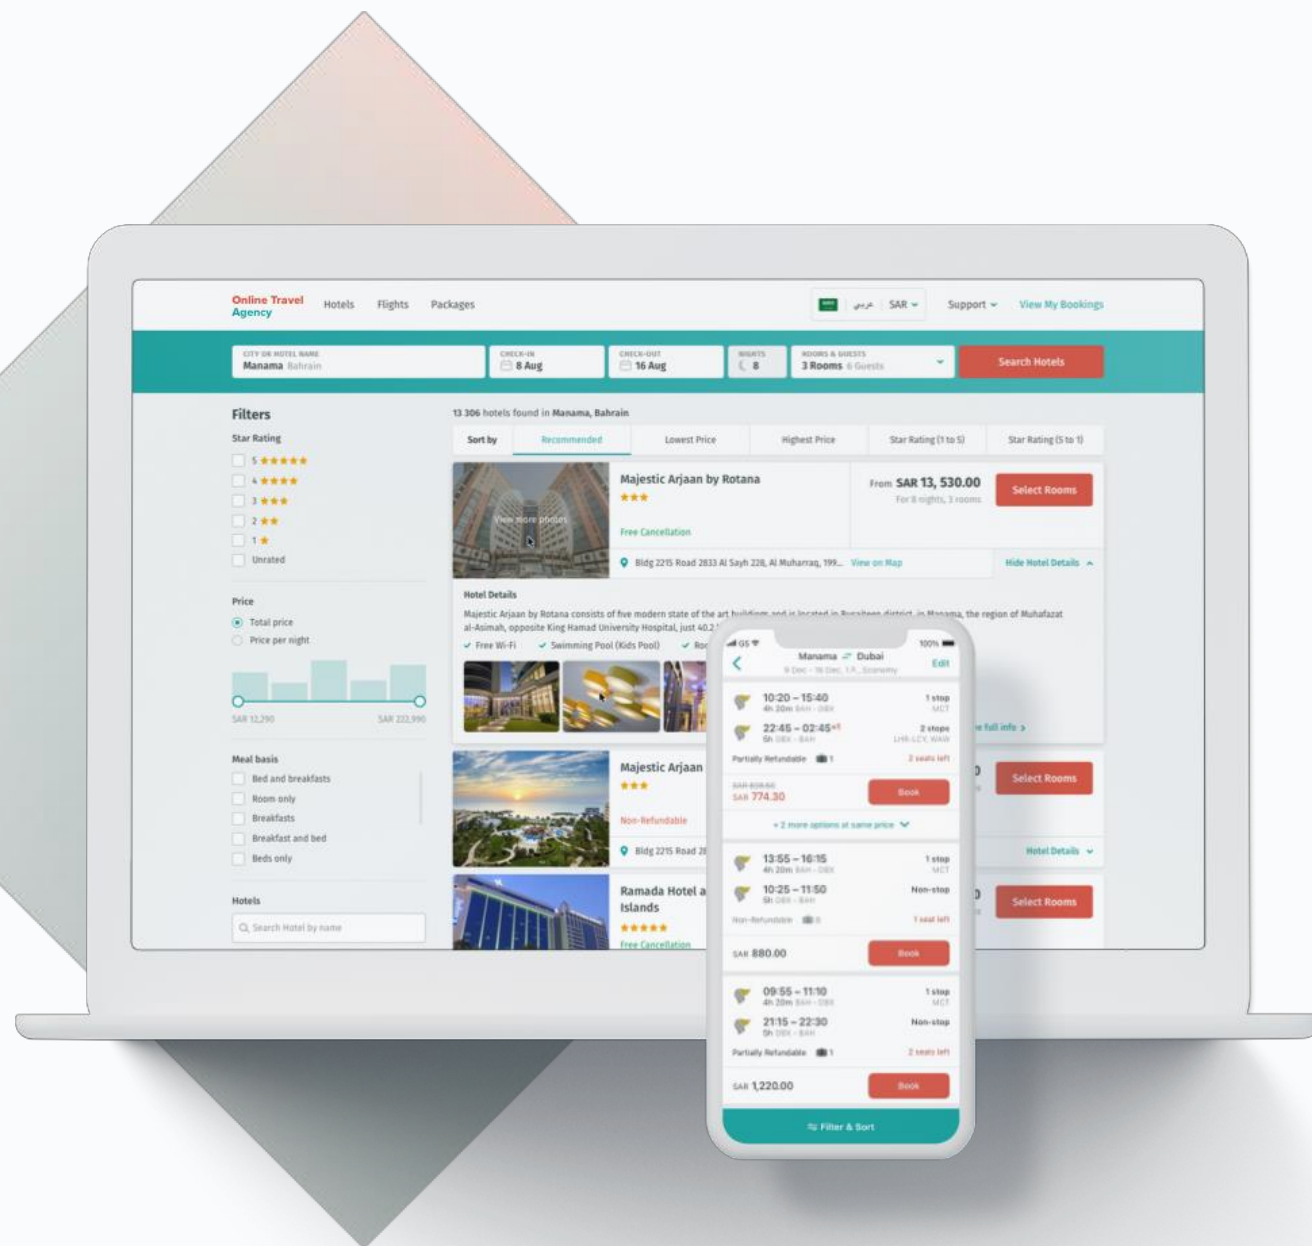

CASE STUDY

Complete OTA Platform

The client is one of the largest travel groups in the Middle East that offers airfares, hotels, packages, tours, and local experiences.

AltexSoft has built the full solution that includes a booking engine integrated with inventory providers, a back-office with advanced commission business rules engine, a mid office for booking management, etc. The solution includes web as well as iOS and Android apps for travellers.

CASE STUDY

Cloud Web Dashboard as a Corporate Travel Management Solution

Cornerstone Information Systems (CIS) is a global SaaS technology provider that helps travel companies and corporate buyers do business more efficiently. CIS engaged AltexSoft to build 4site, a journey management tool, that allows travel agents to proactively respond to flight disruptions and recover their customers – business travellers – by rebooking the flights.

CASE STUDY

Fareboom.com – Mobile App for Online Booking and Itinerary Management

Fareboom is a US-based online travel agency that, not being able to compete with unique content or limitless marketing budgets, strategized its technology as a cornerstone to gain a bigger market share.

AltexSoft re-designed the whole solution, implemented major UX improvements, and created a mobile App. The real game changers for Fareboom's business were a couple of machine learning modules: fair predictor and personalization engines, that drastically increased conversion and returning clients' rate.

CASE STUDY

Mobile-First Airline Operations Management Environment for Comply365

Comply365 is a leading US-based provider of airline operations and transportation management software. The company digitalizes airlines operations by offering a mobile electronic flight bag (EFB); an application for maintenance, repair, and overhaul (MRO) workflow; training and compliance management software; business intelligence, etc.

AltexSoft has modernized more than 15 different modules and keeps working on new features development.

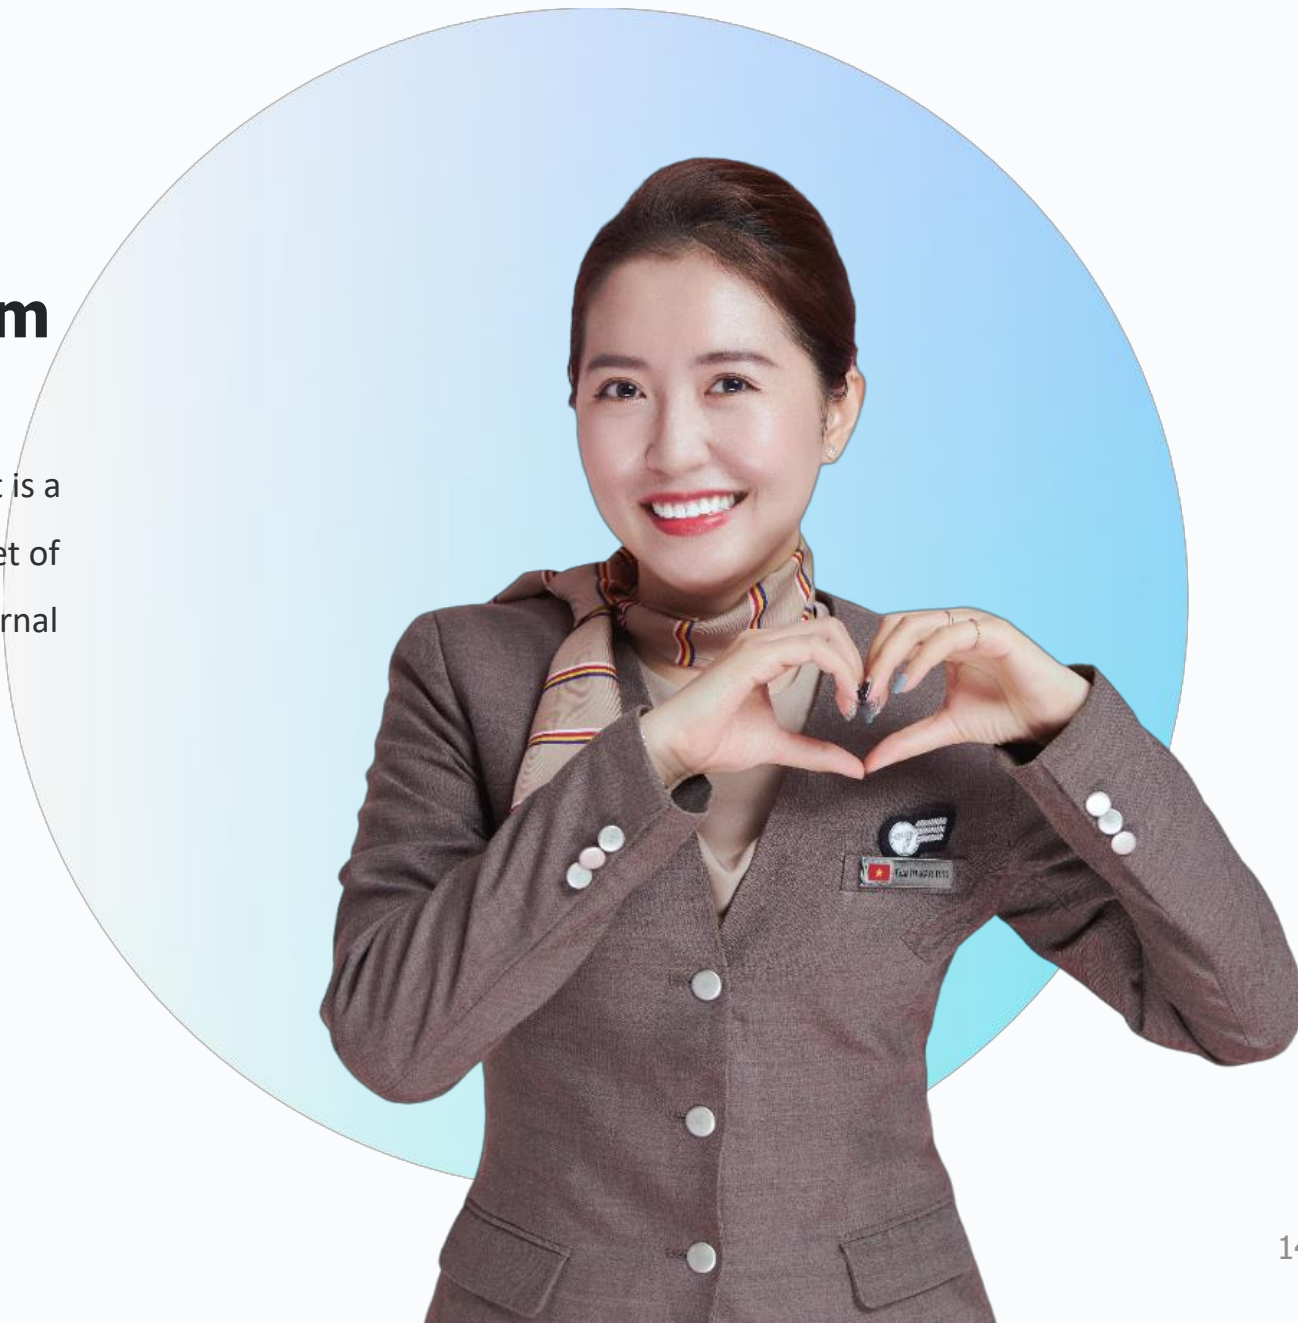

CASE STUDY

Merlot Aero: Enhancing Airline Operations Management System

Now part of the global CAE corporation, Merlot's core product is a cloud-based airline operations management system. It utilizes a set of modules that are used for operations and crew management, internal staff planning, and regulatory compliance tracking.

AltexSoft refactored the legacy code, analysed the architecture design, implemented a vast number of features extending current product capabilities, completely reimagined the app UI.

Testimonials

Marko Cadez

CEO at Fareboom

AltexSoft's commitment to precision in the overall planning and execution of the full development cycle ensures sustainable application growth. I highly recommend AltexSoft to well informed and educated clients who appreciate and understand the benefits of a holistic approach to application design and development, resulting in minimum cost of development and ownership.

Jorge Steinfeld

CIO at ISSTA

I have been working with Altexsoft for the past two and a half years. We had a very positive experience. Altexsoft knew exactly what type of people to allocate to our project and provided the most suitable person at each stage of the project. I had a very positive experience throughout the project (which is still continuing), the 360 degrees support provided by Altexsoft is very much appreciated and recommended.
